

Premis[®] Fungicide

Summer Disease

Premis

- Broad-spectrum disease control for up to 21 days
- Excellent turf safety, even during summer stress
- Low active ingredient load

How Premis Works

Premis delivers exceptional value while controlling a broad-spectrum of diseases even in the summer heat. It is quickly absorbed by leaves and crowns of treated turfgrass which makes it very rapidly rainfast.

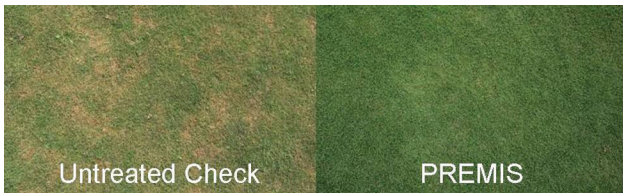

Premis' low active ingredient rate makes it an ideal tool for superintendents trying to reduce their AI levels.

Diseases Controlled

- Anthracnose
- Dollar Spot
- Fusarium Patch*
- Microdochium Patch / Pink Snow Mould
- Brown Patch
- Grey Snow Mould

* Suppression only

Premis for Dollar Spot Control

Source: BASF Photo (Cambridge ON)

How Premis works:

Premis 200F is a systemic fungicide that is absorbed by the leaves and crowns and controls disease by interfering with the sterol and cell membrane biosynthesis. Fungal activity ceases within one or two days when applied curatively.

How to apply Premis

Anthracnose: 16-32 mL/100 m²

Brown Patch: 32 mL/100 m²

Dollar Spot: 16 mL/100 m²

Apply PREMIS in 6-8 L of water /100m²

Technical Information

Fungicide Group: 3

Active Ingredient: Triconazole

Rainfast: 1 hour

Formulation: Suspension

Packaging: 2 x 3.2 L per case

ALWAYS READ AND FOLLOW LABEL DIRECTIONS
